

# **WIN Learning Career Readiness System Enhancements**

**(Version 2.1)**

## **Highlights:**

- 1) Placement Test Bookmarking
- 2) Password Updates and Enhancements

### **Placement Test Bookmarking:**

- Learners can stop a placement test in the Career Readiness Courseware (Applied Mathematics, Reading for Information and Locating Information) at any time during the test and they can come back later and resume the test where they were.
- Administrators and Teachers will be able to see on the activity reports the status of the placement tests indicating “0” for “In Progress” if the student stopped the placement test so they can resume later.

### **Password Updates and Enhancements:**

- When creating new users through the administration screens, the Administrator or Teacher has the option to key in a specific password for the new user instead of letting the system assign a random password.
- The Administrator or Teacher can indicate that the password doesn't expire on initial login and therefore doesn't require the new user to create a new password at first login.
- Batch enrollment files will now contain a password column and password expiration column. Specific passwords for each user can be assigned instead of letting the system assign a random password and the user can indicate if the password expires or not.
- When creating a new Administrator or Teacher, an email will be sent to the email address of the new user. The email shows the user login name and initial password.
